

Patient Edu, LLC Product Overview

Patient Edu JCAHO Compliant Management Software License

This database will be installed on the central server in your hospital which will allow you to assign and prescribe education for any treatment a patient has been admitted for. This will provide the patients with customized patient presentations which can be modified and changed by the on-duty nurse to meet the targeted learning needs for each and every patient admitted to your hospital. The reporting capability will track the patient and/or a significant other, or a family member or all of the above recording what they actually watched, what their knowledge level was and report what further education may be required by this patient to meet "JCAHO's continuum of education requirements".

The Patient Edu Web Portal License

The patient web portal license allows the hospital to pre-register a patient or assign education upon discharge through a patient ID and password web access which will allow the patient to view and be educated prior to admission and post-discharge while also being tracked and recorded in the *Patient Edu JCAHO Compliant Management Software* database.

Patient Edu Content License

Patient Education content is a collection of high-quality patient education healthcare programs that is developed and delivered on an interactive, on-demand video basis covering over 1,000 titles, 80% of medical conditions requiring hospitalization for three days or longer.

The benefits to the hospital and the physician are improved patient safety, reduce costs by freeing up nurse personnel and automating the educational process, improving patient compliance and outcomes, reduces readmissions by certifying the patient's knowledge of post operative requirements and improves nurse retention and satisfaction because of the consistent high-quality education that is provided to their patients. This content is licensed to the hospital and branded to the hospital for unlimited use for in-patients, their families and healthcare providers. Patient Edu will customize necessary modules to meet the individual needs of each department within the hospital.

Patient Edu Replication License

Replication License. Patient Edu licenses all content directly to the hospital for branding the content to the hospital. This content can be replicated and dispensed to the patient pre-operatively and post-operatively on DVD, CD-ROM or VHS tape. This customized patient presentation, selected by the hospital, can be dispensed with unlimited use to all patients once the Replication License has been purchased. These replicas often are used in marketing the hospital to referring physicians by allowing the referring physician to dispense the education to the patient prior to admission into your hospital. However, this content is branded and customized to your hospital which facilitates in marketing and increasing physician referrals to the hospital.

Patient Edu Custom Services

Patient Edu will customize the video screens, the main menus, and any content required to be specifically designed for your facility as part of the initial installation and customization fees. This also will include the adding to our library, menu and tracking system any videos that are presently used by the hospital under the hospital's ownership or copyright authorization. All testing questions and custom modules will be included in your program as part of the initial installation.
